

HW1 Solution

Pooja Raj Lakshmi

2025-09-06

Question 1. Use the trees data in the R package *datasets*.

```
1 #loading trees dataset
2 data(trees)
```

Data Exploration

Dataframe has has 31 observations (rows) and 3 numeric variables (columns), i.e. *Girth*, *Height*, *Volume*.

```
1 #checking the structure of the dataframe
2 str(trees)

'data.frame': 31 obs. of 3 variables:
 $ Girth : num 8.3 8.6 8.8 10.5 10.7 ...
 $ Height: num 70 65 63 72 81 ...
 $ Volume: num 10.3 10.3 10.2 16.4 18.8 ...

1 #checking head of trees dataset
2 head(trees)
```

	Girth	Height	Volume
1	8.3	70	10.3
2	8.6	65	10.3
3	8.8	63	10.2
4	10.5	72	16.4
5	10.7	81	18.8
6	10.8	83	19.7

```
1 #checking tail of dataset  
2 tail(trees)
```

	Girth	Height	Volume
26	17.3	81	55.4
27	17.5	82	55.7
28	17.9	80	58.3
29	18.0	80	51.5
30	18.0	80	51.0
31	20.6	87	77.0

```
1 summary(trees)
```

Girth	Height	Volume
Min. : 8.30	Min. :63	Min. :10.20
1st Qu.:11.05	1st Qu.:72	1st Qu.:19.40
Median :12.90	Median :76	Median :24.20
Mean :13.25	Mean :76	Mean :30.17
3rd Qu.:15.25	3rd Qu.:80	3rd Qu.:37.30
Max. :20.60	Max. :87	Max. :77.00

```
1 #checking for missing values  
2 colSums(is.na(trees))
```

Girth	Height	Volume
0	0	0

```
1 cor(trees)
```

Girth	Height	Volume
Girth 1.0000000	0.5192801	0.9671194
Height 0.5192801	1.0000000	0.5982497
Volume 0.9671194	0.5982497	1.0000000
